

## Space Use Codes Reference Sheet

This is a quick reference guide for the different Space Use Codes. The codes are organized into sections for ease-of-reference. To see THECB's detailed descriptions, click [here](#) (see page 75).

Contact Space Inventory with questions concerning these codes ([SpaceInventory@utdallas.edu](mailto:SpaceInventory@utdallas.edu) | 972-883-6201).

### Definition and Background

The *Space Use Code* is a room's exclusive or predominant design or use. These codes should only change when a room's predominant use or physical characteristics have been changed and/or remodeled.

Note: Unlike CIP and Function codes that may be prorated to reflect more than one use, **only one Space Use Code can be assigned to a given room.** For rooms with more than one use, a single determination for the primary activity of the space must be made. The room's one best Space Use Code should be evaluated in terms of time usage rather than space usage.

### Service Codes

Some spaces are used to support other rooms. If a particular room, in design/function and use, is dependent upon or justified by another room (usually nearby), it is considered a service space and identified with a Space Use Codes ending in "5".

Below are some examples of service spaces and their corresponding codes:

- A projection room supporting an adjoined classroom would be considered a *Classroom Service (115)*.
- A storage area for a research lab would be considered a *Research / Non-Class Lab Service (255)*.
- A lounge area or break room used by UTD faculty/staff would be considered an *Office Service (315)*.

### Finding the Correct Space Use Code for a Given Room

The exclusive or predominant design/use of a room determines its Space Use Code. To find the correct Space Use Code for a given room, ask yourself: what is the room designed/configured as and how is it being used?

Refer to the definitions on the next page for guidance in selecting the correct Space Use Code(s).

**Space Use Code Groups/Definitions**

Use the following definitions to determine the Space Use Code for a given room/space.

**Classroom Facilities**

Classroom facilities used as an institution-wide resource (even if they fall under different levels of organizational control).

**Laboratory Facilities**

Instructional or research facilities with special purpose equipment or a specific space configuration that limits activities to a particular discipline or a closely related group of disciplines.

**Office Facilities**

Individual, multi-person, or workstation spaces specifically assigned to academic, administrative, and service functions.

**Study Facilities**

Spaces used to aid in the study or learning process. Includes spaces serving university library functions.

**Special Use Facilities**

Spaces sufficiently specialized in their primary activity or function to merit a unique space code (and typically limited to a small group or special population).

**General Use Facilities**

Spaces comprising a campus general service or functional support system for the institutional and participant community populations.

**Supporting Facilities**

Facilities providing a centralized space for various auxiliary support systems and services of the campus.

**Health Care Facilities**

Facilities used for the administration and support of both human and animal health care services.

**Residential Facilities**

Housing for students, faculty, staff, and visitors to the institution.

**Unclassified Areas**

Houses and other residential properties that are owned or controlled by the institution as commercial investments and do not serve the institution's primary mission.

**Non-Assignable Areas**

General use spaces that are not assigned to a specific organizational unit or program. Includes public restrooms, circulation areas, and building service areas.
